

Task Scenario 1

Functional Requirements	<ul style="list-style-type: none">- The system should allow the user to search for whatever item they're looking for.- The system should be able to authenticate the user, using their "uni.brighton.ac.uk" account.- The users should be able to sort the results by price and user rating.
Non-Functional Requirements	<ul style="list-style-type: none">- The user should be able to navigate through the entire system from the first time they use it.- The system should show the results of the search less than a second after they press enter.
Usability, Legal, Security, and Ethical Requirements	<ul style="list-style-type: none">- The card information that is put on the system should be stored in a secure database, that would be difficult to compromise.- The address information being put into the system should be stored in a secure database, that would be difficult to compromise.- Any personal identification information that is being stored should be encoded to make it more difficult for the information to be compromised.

Task Scenario 2

Functional Requirements	<ul style="list-style-type: none">- The system should be able to authenticate the user, using their "uni.brighton.ac.uk" account.- The system needs to be able to connect to the device the user is on, to allow the user to upload the pictures they want to use.- If a user is viewing their own listing, they should have an edit button that allows them to change/delete the listing.- The user should be able to tag on their listing
Non-Functional Requirements	<ul style="list-style-type: none">- The user should be able to navigate through the entire system from the first time they use it.- The user should be able to look at the listing, immediately after they've uploaded it.- The user should be able to upload more than six pictures if they want to.

Usability, Legal, Security, and Ethical Requirements	<ul style="list-style-type: none"> - The system should only have access to the user's pictures for the duration of the time it takes to find and upload the pictures. - The card information that is put on the system should be stored in a secure database, that would be difficult to compromise. - The address information being put into the system should be stored in a secure database, that would be difficult to compromise. - Any personal identification information that is being stored should be encoded to make it more difficult for the information to be compromised
